إبراهيم يوسف

SUMMARY

Full-stack engineer working mostly in React and TypeScript, with backend experience in Node.js, PostgreSQL and Cloudflare Workers. I built Fastabiqu, a mobile app and website that share one codebase, and I handled its scope, UX, architecture, tests and releases myself. Most of what I build is Arabic-first, so RTL layouts are part of my normal work.

EXPERIENCE

Independent Product Engineer, Fastabiqu Jul 2026 to present
Live at fastabiqu.ebrahimyoussef.com. The Android version finished closed testing on Google Play with 12+ testers, and the release is being prepared.

- Built a free Arabic-first quiz game for families as one TypeScript codebase for Android, iOS and web, using Expo, React Native, Expo Router, NativeWind and Zustand.
- Shipped local multiplayer for 2 to 6 players on one device, a daily challenge, and progress tracking with XP, levels and achievements. The game has 375 reviewed questions.
- Built the content pipeline on a Cloudflare Worker with versioning, ETags, SHA-256 integrity checks and a last-known-good fallback, so new questions reach players without an app update.
- Wrote Jest, Testing Library and fast-check property tests and put them behind CI quality gates. Shipped builds with EAS Build and EAS Update.
- Made the product decisions (scope, user flows, design system) and recorded architecture choices as ADRs.

Software Developer, Islamic Educational Institution Mar 2026 to May 2026

- Built Arabic-first workflows for tracking student progress and weekly assessments.
- Worked on the UI, API contracts, validation, authentication and the PostgreSQL/Prisma data layer.
- Built small internal tools on top of Excel and Telegram for the operations team.

Mandatory Military Service, Egypt Jul 2024 to Dec 2025

Front-End / Full-Stack Developer, AFDV Marketing Jan 2023 to Jul 2023

- Built a Next.js e-commerce website from Figma designs, with a Django backend.
- Built an internal CMS and an event calendar with a small team.

Freelance React Developer, Upwork 2022

- Two short projects: a responsive content-calendar UI built from PSD designs, and a JavaScript library integration in a Next.js app.

PROJECTS

Quote Vault github.com/ebrahim-youssef/quote-vault
Full-stack web app built with Next.js, TypeScript, Prisma, PostgreSQL and NextAuth. Includes i18n and light and dark themes.

SKILLS

Frontend	React, TypeScript, JavaScript, Next.js, Tailwind CSS, shadcn/ui, RTL/Arabic UI, accessibility
Mobile	React Native, Expo, Expo Router, EAS
Backend	Node.js, Express, REST APIs, authentication, PostgreSQL, Prisma, Supabase, Cloudflare Workers
Testing, delivery	Jest, Testing Library, fast-check, ESLint, GitHub Actions, Vercel
Product	MVP scoping, user flows, specs, ADRs, release management

CERTIFICATIONS

Advanced Full-Stack Web Development Nanodegree, Udacity (2022)
React Development Cross-Skilling Nanodegree, Udacity (2022)
Web Development Challenger, Udacity (2021)

LANGUAGES

Arabic (native), English (fluent)
